Sources: 2010 Census of Population and Housing, SF1; 2013-2017 American Community Survey 5-year estimates

Note: The above figures were derived through a population-weighted areal interpolation process. Census and ACS data for census blocks, census block groups, and census tracts were used to "fit" the data into county supervisory district boundaries. The "fit" is rarely perfect so the above figures should be used as estimates with some small inherent error. As a result, the county supervisory district totals will not necessarily sum to the county total. In addition, the detailed socio-economic data comes from the American Community Survey which produces estimates based on a relatively small sample. There is also some error associated with ACS estimates that is represented by "margins of error" around published estimates. The "margins of error" for the estimates above are not included.

Sources: 2010 Census of Population and Housing, SF1; 2013-2017 American Community Survey 5-year estimates

Note: The above figures were derived through a population-weighted areal interpolation process. Census and ACS data for census blocks, census block groups, and census tracts were used to "fit" the data into county supervisory district boundaries. The "fit" is rarely perfect so the above figures should be used as estimates with some small inherent error. As a result, the county supervisory district totals will not necessarily sum to the county total. In addition, the detailed socio-economic data comes from the American Community Survey which produces estimates based on a relatively small sample. There is also some error associated with ACS estimates that is represented by "margins of error" around published estimates. The "margins of error" for the estimates above are not included.

Sources: 2010 Census of Population and Housing, SF1; 2013-2017 American Community Survey 5-year estimates

Note: The above figures were derived through a population-weighted areal interpolation process. Census and ACS data for census blocks, census block groups, and census tracts were used to "fit" the data into county supervisory district boundaries. The "fit" is rarely perfect so the above figures should be used as estimates with some small inherent error. As a result, the county supervisory district totals will not necessarily sum to the county total. In addition, the detailed socio-economic data comes from the American Community Survey which produces estimates based on a relatively small sample. There is also some error associated with ACS estimates that is represented by "margins of error" around published estimates. The "margins of error" for the estimates above are not included.

Sources: 2010 Census of Population and Housing, SF1; 2013-2017 American Community Survey 5-year estimates

Note: The above figures were derived through a population-weighted areal interpolation process. Census and ACS data for census blocks, census block groups, and census tracts were used to "fit" the data into county supervisory district boundaries. The "fit" is rarely perfect so the above figures should be used as estimates with some small inherent error. As a result, the county supervisory district totals will not necessarily sum to the county total. In addition, the detailed socio-economic data comes from the American Community Survey which produces estimates based on a relatively small sample. There is also some error associated with ACS estimates that is represented by "margins of error" around published estimates. The "margins of error" for the estimates above are not included.

Sources: 2010 Census of Population and Housing, SF1; 2013-2017 American Community Survey 5-year estimates

Note: The above figures were derived through a population-weighted areal interpolation process. Census and ACS data for census blocks, census block groups, and census tracts were used to "fit" the data into county supervisory district boundaries. The "fit" is rarely perfect so the above figures should be used as estimates with some small inherent error. As a result, the county supervisory district totals will not necessarily sum to the county total. In addition, the detailed socio-economic data comes from the American Community Survey which produces estimates based on a relatively small sample. There is also some error associated with ACS estimates that is represented by "margins of error" around published estimates. The "margins of error" for the estimates above are not included.

Sources: 2010 Census of Population and Housing, SF1; 2013-2017 American Community Survey 5-year estimates

Note: The above figures were derived through a population-weighted areal interpolation process. Census and ACS data for census blocks, census block groups, and census tracts were used to "fit" the data into county supervisory district boundaries. The "fit" is rarely perfect so the above figures should be used as estimates with some small inherent error. As a result, the county supervisory district totals will not necessarily sum to the county total. In addition, the detailed socio-economic data comes from the American Community Survey which produces estimates based on a relatively small sample. There is also some error associated with ACS estimates that is represented by "margins of error" around published estimates. The "margins of error" for the estimates above are not included.
